

An Introduction to the Biomass and Fossil Fuel Research Alliance (BF2RA) and Overview of Project Portfolio

Greg Kelsall, BF2RA Chairman

**Coal Research Forum:
Presentation of a selection of projects
funded through the BF2RA Research
Programme**

University of Nottingham, 15 October 2013

BF2RA – What is it?

- BF2RA was formed in late 2009. It is a not for profit company that is limited by guarantee
- Membership is open to both the private and public sector
- Members currently include those from the electricity supply industry, equipment manufacture, fuel user and research sectors
- The objectives of BF2RA are to promote research into issues related to biomass and fossil fuels
- BF2RA also organises the annual Coal Science Lecture

**Comprises 7 “world class” energy, equipment supplier
and coal utilisation companies**

ALSTOM

 BRITISH SUGAR

DOOSAN

Drax **

EPRI | ELECTRIC POWER
RESEARCH INSTITUTE

** Drax confirmed as a new member for 2014

BF2RA Membership Levels

- The annual membership subscription for 2014 is as shown below. This subscription may be varied in subsequent years subject to the agreement of the Membership of BF2RA
 - Tier 1 (Fuel / major equipment suppliers/ power generators) £25,000
 - Tier 2 (Users, consultants) £12,500
 - Tier 3 (R&D/ government organisations) £18,000

BF2RA Funding Model/Open Call Process

- Typically up to £40k per successful project with balance funding coming from academic institution, other third party and/or UK Research Council
- Typically fund 3-4 year PhD projects but can be shorter duration RA projects in well justified cases

Total time for process~ 9 months

Priority Research Themes

Priority research themes for the 2012 Open Call for Proposals were as follows :-

- Utilisation of fossil fuel and biomass
- Materials development
- Advanced cycles for fossil fuel/biomass utilisation and issues relating to performance
- Control of emissions and products arising from fossil fuel and biomass utilisation

Updating these ready for new 2014 Call for Proposals. 4-5 new projects expected to be awarded for Oct 2014 start

- Topic for Session 3 Panel discussion this afternoon

BF2RA's project portfolio

Eleven research projects are currently underway:-

- Dynamic modelling and simulation of supercritical coal-fired power plant with CO2 capture ability - University of Hull
- Intelligent flame detection incorporating burner condition monitoring and on-line fuel tracking – University of Kent
- Impact of biomass torrefaction on combustion behaviour in co-firing – University of Nottingham
- Avoiding sintering of coal-fired shallow fluidised beds – University of Nottingham
- Milling and conveyance of biomass – University of Nottingham
- A new classification system for biomass and waste materials – University of Nottingham
- Modelling of power plant alloys – University of Nottingham
- Development of a novel feeding system for use with high pressure combustion and gasification systems – University of Sheffield
- Low Temperature Ignition of Biomass – University of Leeds
- Novel Coatings for Biomass Firing – University of Cranfield
- Coated Ferritic Alloys – University of Nottingham

Included in agenda

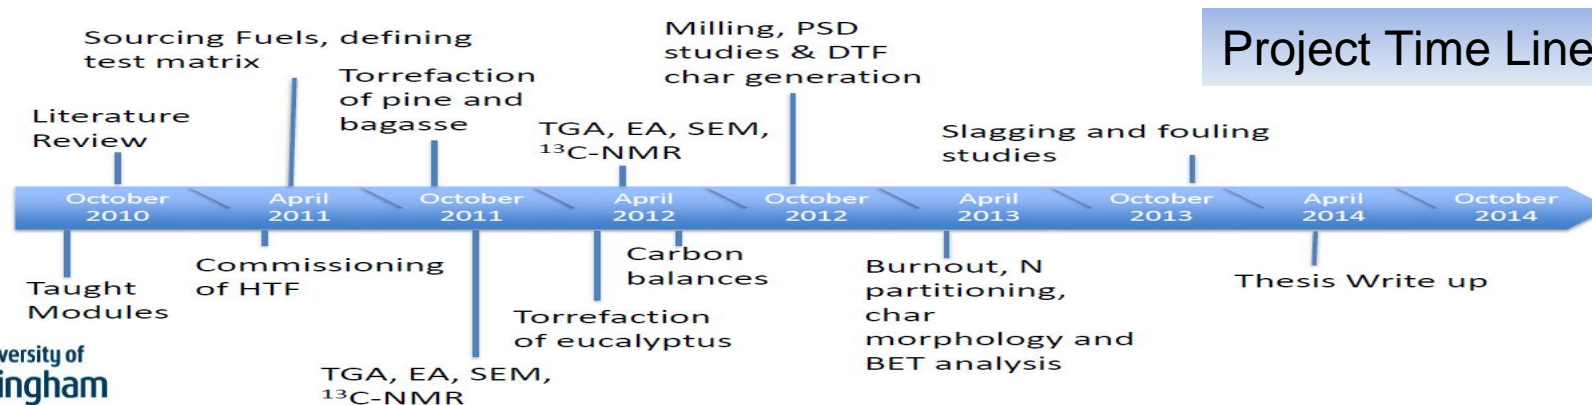

Impact of Biomass Torrefaction on Combustion Properties in Co-firing

Researcher: Umair Hussain (main supervisor - Prof Colin Snape)

Aim : Investigate key fundamental issues associated with the development of torrefaction technology to help promote the more widespread use in the UK

Scope:

- Source fuels/ generation of torrefied samples
- Proximate/ultimate analysis using TGA and EA
- Determination of calorific value
- Scanning Electron Microscopy (SEM) to study visual changes

Avoiding the sintering of coal-fired shallow fluidised beds

Researcher: Daniel Afilaka (main supervisor - Dr Hao Liu)

Aim :

Investigate the causes of fluidised bed sintering in biomass co-fire and define safe operating modes to avoid sintering

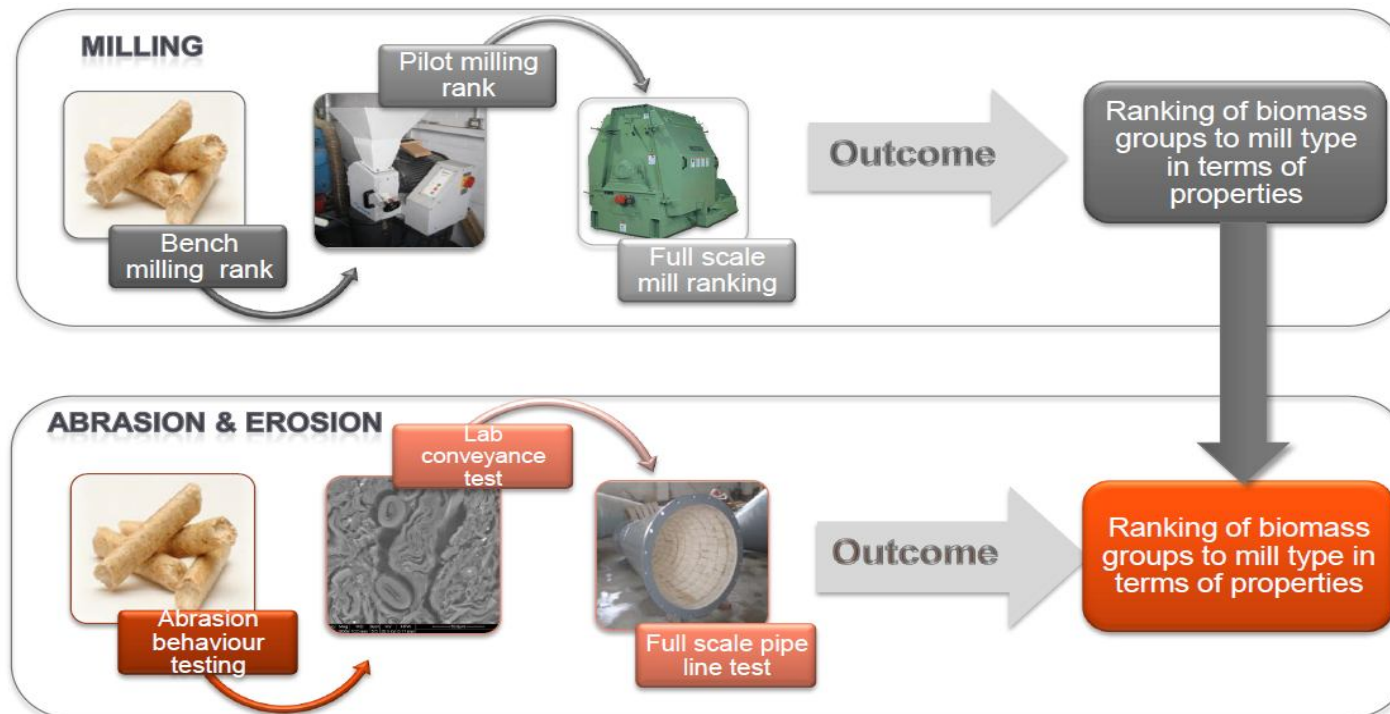

Utilisation of Fossil Fuels and Biomass – Fuel Preparation & Transportation

Researcher: Orla Williams (main supervisor - Dr Carol Eastwick)

Aim :

To rank and classify grinding, erosion and abrasion behaviour of biomass types to different mills.

Development of Novel Feeder for Pressurised Systems

Researcher: James Craven

Aim : develop a novel/ reliable feeder to continuously feed solid fuel into high pressure environments to enhance the commercial viability of high pressure gasifiers/ combustors

Modified Lock-Hopper System as design basis:

- Uses water as an incompressible fluid
- No use of inert gas for pressurising
- No syngas dilution with inert gas
- Mode 1: No net change in operating pressure- theoretical energy saving compared to a conventional lock hopper of 89% at 50 bar
- Mode 2: No waste of product syngas- theoretical energy saving compared to a conventional lock hopper of 81% at 50 bar

Lock Hopper Test Rig

Development of Novel Coatings to Resist Fireside Corrosion in Biomass-Fired Power Plants

Researcher: Dominika Orlicka (main supervisor - Dr Nigel Simms)

Aim :

- To develop the best coating composition resistant to fireside corrosion in biomass-fired power plants using a multi-target magnetron sputtering system
- To expose the best coating composition in a specially constructed furnace to simulate the chloride-induced corrosion conditions
- To understand the influence of elements: Co, Cr, Al, Ni, Fe on the coatings properties and their role in chloride-based corrosion
- To deposit the best coating composition onto the heat exchanger tubes to identify their thermal stability and confirm the corrosion resistance
- To evaluate the alternative methods of applying the best coating compositions to boiler tubes

Magnetron Sputtering System

Integrity of Coated Ferritic Alloys under High Temperature Creep and Fatigue

Researcher: Thomas Hoey (main supervisor - Dr Wei Sun)

Aim :

Investigate the mechanical and chemical integrity of coated samples subjected to high temperature exposure and steady / cyclic mechanical loadings

Specific Objectives:

- Gain a better understanding of presently developed coatings and the associated key failure mechanisms
- Rank the potential coatings based on testing results
- Provision of generic understanding of factors limiting coating service life

Typical MCrAlY coating

BF2RA's project portfolio- new projects

Three research projects selected for 2013 starts:-

13. Biomass Exacerbated Cyclic Oxidation of Steels in Steam (BECOSS)- University of Birmingham
14. Biomass cofiring with low volatile matter coals– University of Nottingham
15. Modelling milling of biomass – University of Nottingham

BF2RA Value to Members

- World class research with good funding leverage
 - 2.5m€ equivalent programme (at full economic cost) in 2013 increasing to 3m€ in 2014
- Full access to 6 monthly progress reports and final reports via 'member only' area of BF2RA web-site
- Full access to attend any project progress meeting
- Provide Industrial Supervisor for project of particular interest
- Shape the scope of the open call and detail of invited projects
- Member of the BF2RA 'Club'
 - Better understanding of supplier/customer research interests
 - Collective view often better than the individual company view
- Select speaker for annual Coal Science Lecture (London)
 - Primarily funded with BCURA grant + sponsorships
